

1. Load roster

Extract the ZIP, then double-click Basketball-Score-Sheet-Stickers.exe.

The screenshot shows the 'Basketball Score Sheet Stickers' application window. The title bar reads 'Basketball Score Sheet Stickers'. The interface has a light blue sidebar on the left with the text 'BASKETBALL SCORE SHEET STICKERS' and three menu items: '1 Load roster' (highlighted), '2 Review team', and '3 Save PDF'. The main content area has a header with three steps: '1 Load roster', '2 Review team', and '3 Save PDF'. Below this is the title 'Load roster' and a subtitle 'Import a CSV, or start with a blank roster and enter your team manually.' There are two main sections: 'Import CSV' with instructions 'Use a CSV or TXT with number, name and role columns. Review and edit the imported roster on the next screen.' and a button 'Choose CSV / TXT'; and 'Enter manually' with instructions 'Enter player names, jersey numbers and coaches without a CSV.' and a button 'Skip CSV / Enter manually'. At the bottom of the main area, it says 'Up to 15 players. Coaches are optional. No internet connection needed.' In the bottom left corner of the window, a message states 'No internet connection required.'

Choose CSV / TXT to load your roster, or skip CSV to enter names manually.

No Python, Illustrator, administrator access, or internet connection is required.

The EXE contains the template and libraries; it uses Windows Arial.

Keep the included sample CSV as a fictional example.

Enter the team name and check every player, number, and coach.

Use up to 15 player rows. Leave unused rows completely blank.

On smaller screens, scroll the form; tabbing brings fields into view.

Jersey numbers must be unique and contain 1-3 digits (0-999).

Head coach is optional. Enter assistant coaches one per line.

Click the top steps or Back to navigate. Edits stay in this open session.

Close the app only after saving: edits are not saved as a roster file.

BASKETBALL SCORE SHEET STICKERS

Windows 10/11 x64

3. Save and print

Create a separate PDF with six home and six away roster stickers.

Browse for a new filename, then choose Create printable PDF.

With a CSV import, Browse starts in the CSV folder. Existing files are protected.

Open saved PDF launches your default PDF viewer. Print at 100% / actual size.

Test on plain paper against the score sheet before printing adhesive sheets.

Smaller rosters leave unused slots blank. Long names shrink to fit.

CSV format and troubleshooting

Store each team roster and its generated PDFs together.

UTF-8 CSV or TXT

```
number,name,role  
7,Example Player,Player  
na,Example Head Coach,Head Coach  
na,Example Assistant,Assistant Coach
```

Roster rules

Use the header above. Supported roles: Player, Head Coach, Assistant Coach.
Use 1-15 players and at most one head coach. Player order is preserved.
Quote names containing commas. Save as UTF-8 for accented names.

If the app rejects a roster

Check missing names, duplicate numbers, extra CSV columns, and role spelling.
Shorten names that cannot fit legibly. Remove unsupported characters.
Choose a new filename if the output PDF already exists.

Printing and opening PDFs

Use actual size, not Fit to page. Confirm alignment with a plain-paper test.
If Open saved PDF fails, open the PDF directly in your preferred viewer.

Compatibility and local files

Designed for Windows 10/11, 64-bit. Tested on Windows 11.
The app runs locally and makes no network requests. A PDF viewer is needed to view or print the result. The executable is not digitally signed.
Changes remain in memory until you close the app; PDFs are saved to disk.
Free personal use. Redistributing or reselling the app requires written permission.
